(57) Abstract :

The Present discloses provides a cap (100) for a container. The cap (100) comprises a cylindrical wall (1) configured to at least partially enclose a neck of the container, a fixed plate (3), a moveable plate (4) and an actuation assembly (9). The cylindrical wall (1) defines a cavity. The fixed plate (3) is attached with the cylindrical wall (1) in the cavity. The moveable plate (4) is configured for moving between a closed 10 position in which the moveable plate abuts the fixed plate to close the cavity for retaining one or more additives in the cavity and an open position to release the one or more additives from the cavity. The actuation assembly (9) attached to the cylindrical wall (1) and comprises a housing (5), a pin (6) and an actuation lever (8). The housing (1) is configured to accommodate one or more components of the actuation assembly (9).
