(57) Abstract :

A method and a system are provided for facilitating transfer of images from a first image capturing device to a second image capturing device. In an embodiment, a first set of plurality of images are captured using the first image capturing device. Upon determination of at least one of the captured plurality of first set of images being not meeting a predefined quality standard, a connection is established between the first image capturing device and the second image capturing device. Further, access permission is granted to access in real-time an image capturing screen of the first image capturing device to the second image capturing device. Upon receiving the access permission, a plurality of second set of images is captured and is stored to the second image capturing device, and is transferred to the first image capturing device.
