(57) Abstract :

The present disclosure pertains to an apparatus (100) to facilitate cleaning of a board. The apparatus (100) includes an encasing (102) comprising an eraser (104) positioned on a bottom surface of the encasing (102) to facilitate cleaning. The apparatus (100) includes a container (106) configured to be positioned within the encasing (102) and adapted to store a cleaning solution to clean the board. A roller assembly (108) configured to be positioned at the encasing (102) to hold an absorbing element (110), where the absorbing element (110) wrapped on a rod (108-a) and upon rotating an elongated member (108-b), the absorbing element (110) covers the eraser and facilitates cleaning of a permanent ink from the board using the cleaning solution stored in the container (106).
