(57) Abstract :

The present disclosure relates to an apparatus (100) for distribution of coating layer on a food product, the apparatus includes at least one horizontal arm (102) configured with a sharp edge at one side adapted to smoothen the coating layer on top surface of the food product, a plurality of grooves (202) configured on one side of the at least one vertical arm, to smoothen the coating layer on side surface of the food product, wherein the at least one horizontal arm and the at least vertical arm are arranged in perpendicular to each other. A handle (106) configured to hold the apparatus, wherein, the at least one horizontal arm are held in position at the predefined angle with the at least vertical arm to distribute the coating layer evenly on the top surface and side surface of the food product.
