(57) Abstract :

A dispenser assembly 100 for dispensing globules of semi liquid material is described. The dispenser assembly 100 comprising a container 102 having a cavity to accommodate the semi liquid material, the cavity being enclosed by a sidewall 104 and a base 108, the base 108 having a set of first apertures 110-A and a set of second apertures 110-B configured to dispense the globules of different size. At least one plate 114 movably configured within the container to press the semi liquid material against the base within the container 102 that assist in dispensing the semi liquid material from the container 102. The dispenser assembly 100 comprises a driving unit 116 attached with a cord 118 to actuate the movement of the at least one plate 114 within the container 102.
