(57) Abstract :
 The present invention relates to a device for collecting tablets/capsules of different sizes and shapes in a container by puncturing a blister without touching the oral medicines. The device comprises a mother cylinder (102), a puncher mechanism (300, 400) in multiple diameters & shapes along with a plunger (304, 404), a container (202), a lid holding head (204), a lower lid (208), and an upper lid (206). By placing the blister pack above the lower lid, the appropriate plunger is pressed down just above the tablets/capsules that tear off the blister's foil, and the tablets/capsules are dropped in the container.
